

Security and Compliance for VMware Zimbra

A Best-of-Breed Security and Compliance Solution

Proofpoint Enterprise makes it easy to add enterprise-grade security and compliance to any VMware Zimbra deployment. The solution delivers email security features to protect against the latest email threats, including spam and phishing, along with data privacy features to assist organizations in complying with many types of state/local, national, international, and industry regulations. Proofpoint Enterprise for VMware Zimbra includes the Proofpoint Enterprise Protection and Enterprise Privacy Suites — available as a virtual appliance or in the cloud.

Proofpoint “Fills the Gaps” in Enterprise Collaboration

Delivering an enterprise-grade messaging and collaboration solution requires taking a holistic approach to email communication. Enterprises face many challenges when it comes to email, whether they are from external threats such as spam and phishing attacks, or from risks of non-compliance with government and industry regulations with outbound email. It is more critical than ever for organizations to implement a collaboration solution that includes security and compliance features to mitigate these risks.

Proofpoint Enterprise Protection – Anti-spam and Anti-phish

Spam is becoming more sophisticated in attempts to escape being detected. Proofpoint Enterprise Protection is a best-of-breed email security solution with highly accurate spam detection (greater than 99% detection effectiveness) and the lowest total cost of ownership. More threatening, however, is the evolution of spam into malicious phish attacks, with criminals intent on stealing user credentials or an enterprise’s confidential information. To combat this, Proofpoint Enterprise Protection also includes anti-phishing technology to detect these advanced attacks. A specific classifier for “phish” is included so that emails classified as such cannot be accessed by end users, preventing further advancement of the phishing attack.

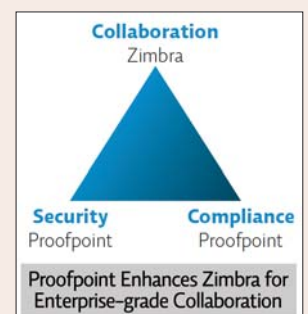

Proofpoint Enterprise Privacy – Encryption and Data Loss Prevention

Government and industry regulations such as HIPAA, GLBA, U.K. Data Protection Act, PIPEDA, PCI compliance guidelines, FERPA and SEC regulations continue to get stricter, with many now requiring implementation of encryption. Enterprises are also including encryption in the privacy solutions they purchase because it is simply a best practice to do so. Proofpoint Enterprise Privacy includes easy-to-use policy-based encryption that mitigates the risks of violating these regulatory and corporate policies.

VMware Zimbra

Proofpoint Enterprise for VMware Zimbra Value Propositions:

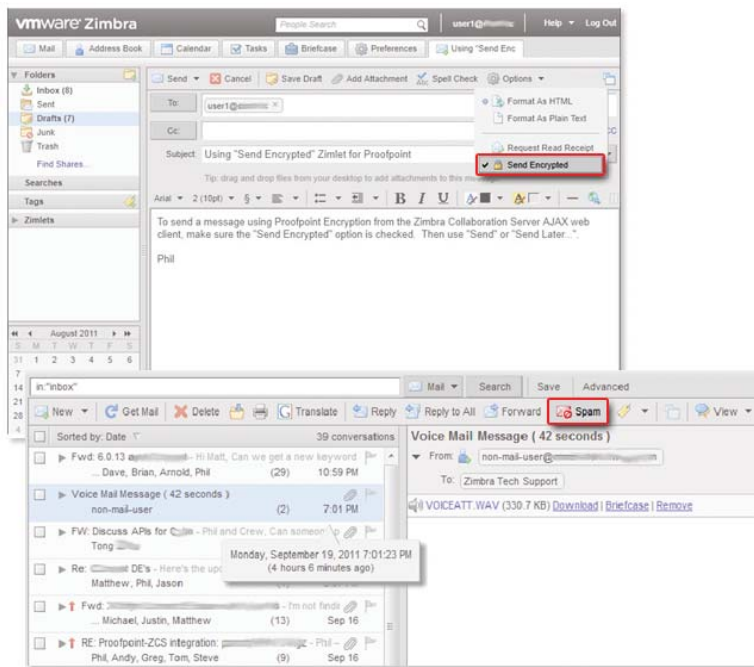

1. Protects against email security threats before they reach VMware Zimbra with highly accurate spam detection and defense against phishing attacks
2. Removes compliance challenges when migrating to VMware Zimbra with policy-based encryption
3. Prevent, leaks of sensitive data via email and minimize business and regulatory risks around data leakage
4. Complements VMware Zimbra with powerful, easy-to-use features and rapid deployment

To safeguard leakage of intellectual property and sensitive information, Proofpoint Enterprise Privacy also provides “defense in depth” data loss prevention to protect against inadvertent leaks of confidential information. This not only includes scanning email content for sensitive information such as social security or credit card numbers, but also scanning file attachments such as Microsoft Office documents or CAD drawings for possible leakage of intellectual property.

Technical Integration

Proofpoint Enterprise integrates with VMware Zimbra to provide a seamless end user experience. A “Secure Send” Zimlet enables users to encrypt messages from within the Zimbra email interface, and the “Report Spam” button allows users to mark messages as spam to train the Proofpoint Enterprise Protection server for improved spam handling.

VMware and Proofpoint

VMware and Proofpoint have worked jointly on thousands of deployments to provide virtual security and compliance since 2006. Together, our combined expertise in email and email security allow us to deliver a superior enterprise-grade messaging and collaboration solution for defense against email-related security and regulatory risks.
