CYBERSECURITY

BACK STAGE PASS

HOW TO BEAT SOCIAL ENGINEERS

Social engineers want to take advantage of your trusting nature to get information and access.

DON'T BE A VICTIM! FOLLOW THESE BEST PRACTICES:

Never hold open secure doors for people you don't know

Protect passwords and other secure data

Verify people are who they say they are, in person, via email, and on the phone

Trust your instincts; if something seems off, ask your manager for help

Remember: Anyone can be targeted by a social engineer, and even the smallest pieces of information have value.
