

Proofpoint Enterprise Archive

Deliver Secure, High-Performance Archiving

KEY BENEFITS

- Capture digital communications from a variety of sources.
- Help ensure and demonstrate compliance with supervisory review.
- Improve efficiency and reduce costs with built-in features for search, preserve and export.
- Store communications in a secure, accessible, compliant, cloud-native archive.

Proofpoint Enterprise Archive is a cloud-based archiving solution that simplifies legal discovery, regulatory compliance and data access for your end users. It provides a central, searchable repository that supports a wide range of content types. You can say goodbye to the headaches of managing an archive in-house with our fully managed service.

With Enterprise Archive, all of your critical data is stored securely. You can quickly collect, search and retrieve that data on demand. You can also establish and enforce policies and review processes for specific regulations and geographies. By streamlining data storage and access, you can reduce the risk of costly fines, adverse inferences and a damaged reputation.

EASE COMPLIANCE AND DISCOVERY

Enterprise Archive offers security and performance to meet today's compliance and discovery-readiness needs.

Fast Access For Early Case Insight

Enterprise Archive's high-performance search features give you insights to help you refine discovery strategies. It's important that your legal team is able to perform searches quickly, and all relevant data is included. We guarantee that you can easily get search results in near real time. Searches include email messages and more than 500 types of attachments. Plus, you can search the contents of social-media and collaboration-platform communications. Enterprise Archive greatly reduces the time and cost of collecting, filtering and searching data when compared to using restored backup tapes, imaged hard drives and Microsoft Outlook PST files.

Case Management with E-Discovery Analytics

Compliance Risk Dashboard with Intelligent Supervision

Rich Data Visualisation

Our optional E-Discovery Analytics module gives you advanced insight into electronically stored information (ESI) to help you make better decisions. You can use our interactive visuals to understand your search results. These will give you details about key parties, top terms and content distribution over time. You can use Case Management to organise e-discovery elements into cases for improved tracking, visibility and orchestration.

Fast Self-Service Export

Enterprise Archive lets your legal team quickly export large volumes of content in a variety of file formats. These include PST, CSV, JSON, EDRM XML and Relativity load file. There is no need for you to get help from professional services, so there are no additional fees. And the system can automatically upload the results to third-party service providers. That means you get lower costs and fewer delays and questions about compromised chain of custody.

Easy-To-Enforce Retention Policies

It's critical to be able to consistently enforce information retention policies. Enterprise Archive includes policy management features to help you create, maintain and enforce these policies. Enforcement is automatic and based on rules you can configure. When data has reached the end of its retention period, high-performance disposition lets you quickly purge it.

Every policy change and disposition action are tracked for a truly defensible disposition process. Compliant storage helps you meet SEC 17a-4 rules.

Fully Automated Legal Hold Processes

With Enterprise Archive, your litigation hold process is simple, fully automated and included with your subscription. This means there are no extra licenses or fees required. We offer unique features to help you manage your data-preservation requirements. For example, your legal team can instantly preserve data in holds beyond the assigned retention periods. You can also assign access to search only within data assigned to a hold. And our easy-to-use interface provides a full reporting and audit trail.

Intelligent Supervision For Regulatory Compliance

Proofpoint Intelligent Supervision is an optional module built to augment Enterprise Archive. With it, your compliance staff can systematically review messages from a number of sources. These include email, social media, Bloomberg and instant messaging. Content selected for review may be either potential policy violations or chosen through a random sampling process. The information is then automatically routed to the users who are authorised to take action. Intelligent Supervision also provides dashboards and reports that help you manage the review process and keep you ready for regulatory audits.

Broad Support For Social Media And Collaboration Solutions

Your organisation relies on a wide variety of communication channels. That's why Enterprise Archive supports a wide range of content types. Of course, we capture email, from both on-premises Microsoft Exchange Servers and Microsoft 365 (formerly Office 365). But with Proofpoint Content Capture, we can also populate the archive with data from all key collaboration and social-media platforms.

GAIN TOP SECURITY AND SCALABILITY WITH OUR INNOVATIVE CLOUD ARCHITECTURE

Enterprise Archive secures your data in the cloud while making sure you can reliably access it. You can take advantage of the high-performance, total scalability and cost-savings of cloud computing. You also get the highest levels of security and privacy without taking time from your IT team.

Failsafe Archiving Process

Unlike other cloud-based solutions, we give you two options to ensure complete capture.

- Enterprise Archive can use a “pull-and-confirm” method with an archive appliance that pulls messages from the journaling mailbox. Then it confirms that they are stored in the archive before removing them from the archive appliance.
- Our Compliance Gateway also supports a reconciliation process. It provides reporting to give auditors evidence of complete capture.

Search-Performance Guarantee

You can count on having reliable access to your archived data in seconds. We guarantee our search performance with a per-search SLA of 20 seconds or less.

Other competitive archives (that are deployed on-premises), slow down over time and require constant hardware upgrades as the data store grows. Enterprise Archive, on the other hand, scales up automatically, without you having to intervene. Our grid storage architecture and parallel search technology ensure near real-time search performance. And it stays fast no matter how large your archive grows or how complex your searches get.

The Most Secure Archive In The Industry

With our patented Double Blind™ Key Architecture, we're the only archiving vendor that ensures data leaving your site is always encrypted. This means you get uninterrupted data security. Your data is protected both in transit from your data source on-premises or in the cloud and while under management within our cloud infrastructure. To ensure protection, your encryption key is unique to you. You can manage the encryption key for full control over who can access your data within the archive. What's more, our operational and security practices are SSAE-16 certified. All of this adds up to complete data privacy and continuous security.

EXPERIENCE A FULLY MANAGED SERVICE

Delivering business-critical data is a full-time job for IT teams. With Enterprise Archive, we can take care of your archiving needs and let IT focus on more important projects. You can have peace of mind knowing that our fully-managed service has SSAE-16 Type II certification, not just for our physical facilities, but also for the service. This includes our global data centres and world-class support and operations infrastructure. Enterprise Archive is available as a FedRAMP Authorised, SaaS level, moderate impact cloud service. We proactively identify issues and take action. In many cases this occurs before you're even aware of the problem. And our market-leading customer renewal rates and customer satisfaction ratings reflect our responsive, seamless customer experience.

Features and Benefits Table

| FEATURES | | BENEFITS |
|--|--|--|
| Legal Discovery Readiness | | Benefits for Legal |
| Legal hold management | Fully-automates legal hold management process | <ul style="list-style-type: none"> • Respond quickly with consistently fast performance. • Save money with built-in search, preservation and export features at no extra cost. • Identify critical data for downstream legal review more effectively. • Reduce preservation risk with automated processes such as retention and disposition, legal hold, data export. • Lower costs by using E-Discovery Analytics to process and analyse more data in-house. |
| Early case insight | <p>Enables near real-time legal and investigative team insight with fast, self-service search</p> <p>Delivers detailed insights with optional E-Discovery Analytics module</p> | |
| Regulatory Compliance | | Benefits for Compliance |
| Retention policy management | Applies and enforces granular policies | <ul style="list-style-type: none"> • Reduce compliance risk • Meet specific geographic, industry, regulatory and/or business needs. • Save time using one screen to search, review, discover and protect critical data. • Simplify compliance with FINRA, SEC and IIROC regulations. • Save time by adjusting sampling rates and creating review sets to uncover more problematic or sensitive content and less low-risk content. • Pinpoint major compliance risks and easily view violation trends, with drill-down for deeper insights. • Improve response time to regulatory inquiries. |
| Intelligent Supervision | Enables supervisory review of communications | |
| Dashboards and reporting | Consolidates and shows important information | |
| Single “pane-of-glass” interface | Lets users perform multiple functions from one place | |
| End User Access | | Benefits for End Users |
| Intuitive interface for Outlook and mobile device access | Makes it easy for users to search for and retrieve archived content | <ul style="list-style-type: none"> • Get enhanced productivity with data access from desktop, laptop, tablet, phone. • Keep context with the familiar Outlook folder structure. • See relevance right away with keyword highlighting in results. • Enhance efficiency by saving common searches to run at a later time. • Retrieve better results with extensive filtering. |
| Folder Sync | Preserves folder structure to provide greater context for archive search results | |
| Innovative Cloud Architecture | | Benefits for IT |
| Grid architecture | Enables search in seconds regardless of archived volume or complexity of search query | <ul style="list-style-type: none"> • Remove ongoing management hassles with easy deployment and management. • Lower TCO versus legacy on-premises archives. • Get uninterrupted data security and privacy. • Enhance IT productivity. • Control data access. |
| DoubleBlind Key Architecture | Separates encryption keys from encrypted data | |
