

People-Centric Security Program for the Federal Government

Enable your agency's people-centric cybersecurity strategy

Key Benefits

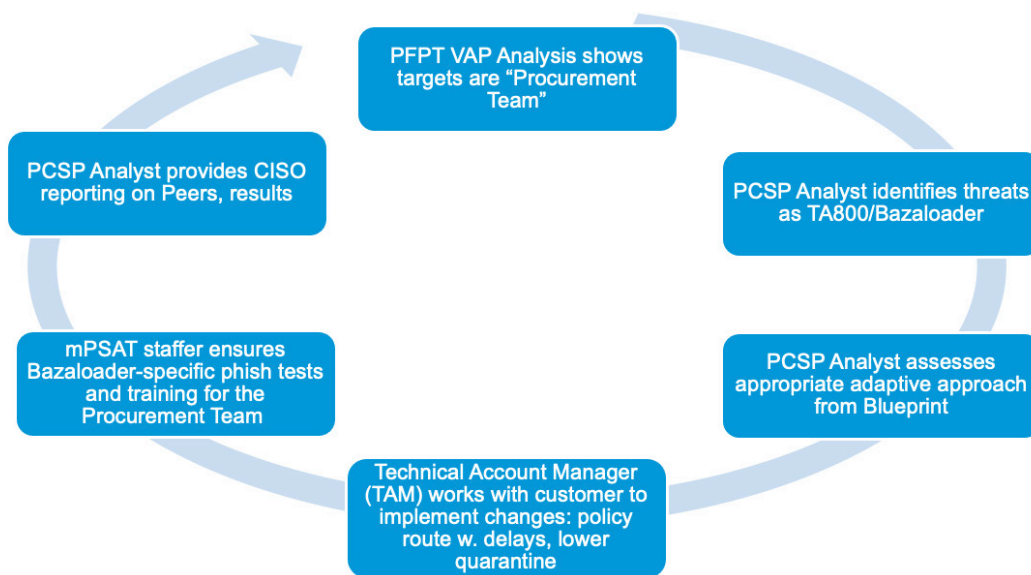

- Unrivaled email-based cyber-threat analysis
- Specific and tailored cyber-defense recommendations
- Weekly tactical analysis sessions
- Quarterly operational and strategic briefings
- Top-tier technical and cyber-threat consultation

Proofpoint People-Centric Security Program (PCSP) for the Federal Government provides the visibility, tools and analysis you need to deal with your most dangerous and common threats. Its intelligence is based on the front of the cyber kill chain. It surfaces attacks on your team and boosts your people-centric security strategy.

PCSP can help federal agencies like yours operate in complicated environments and elaborate infrastructures. Saddled with budgetary and resource constraints, your teams often may be forced to do more with less. So they run from one incident to another, continually playing catch up. And as the security landscape becomes more complex, it is becoming more difficult for them to act with a clear understanding of the situation.

PCSP—Federal is a continuous improvement program. With its dedicated analysis we work with your security and IT teams and make prioritized recommendations to deploy measures that improve your cybersecurity posture.

The Challenge

PCSP—Federal transforms people-focused cyber-threat analysis into actionable and measurable impacts. With understaffed teams under tight time constraints, your organization may not always have the time or resources to analyze the email-threat landscape. As such, your teams might be forced to detect and monitor incidents only after attackers have already gained a foothold in your defenses.

That's where PCSP—Federal comes in. We bring a people-centric approach to security. We help improve the behavioral patterns of your team. We identify not only the threat actors behind each attack, but also the targeted team members and the individuals who click on malicious email-based threats. We also show you how your team's performance compares to that of your peers. And with all of these metrics, we can provide you with actionable intelligence, analysis and recommendations to shore up your defense. We do this within the scope of your team's resources and without halting mission-critical operations.

Program Design and Management

Our PCSP analysts augment your security team. With extensive experience in the federal IT and cyber threat intelligence (CTI) sectors, they have a deep understanding of

the types of cybersecurity challenges that your team faces.

PCSP provides the following:

- Analyst-curated, focused cyber-threat analysis on the first stages of the cyber kill chain
- Coordinated team with cyber-threat analysts, premium support, security-awareness consultants and service delivery
- Prioritization of threats based on targeting, threat capability and current security posture
- Analyst briefings on Very Attacked People™ (VAPs), changes in tactics, techniques and procedures (TTP) and shifts in the threat landscape.
- Tailored weekly tactical analysis sessions to provide context into cyber threats for your organizations SOC, CTI and IR personnel
- Monthly operational threat landscape briefings for distribution
- Operational and strategic briefings for CIO/CISO/SES-level leadership
- Measurable people-focused benchmarks to show improvements during the program
- Access to our larger threat research teams to answer deep-dive RFIs and questions about your data and cyber threats

PCSP operates with the following basic flow:

1. Understand and report on the users or groups that threat actors are targeting
2. Understand the scope, details and capabilities of the threat actors
3. Prioritize mitigations around your organization's most targeted highest-value users
4. Implement mitigations, measure the results, decrease an organization's cyber risk and increase an organization's cybersecurity posture

Our service includes tailored reports and benchmarks. These describe your team's security posture and compare it against industry peers and executive checkpoints. This ensures continued progress with the security team. Proofpoint experts back these capabilities and a central Proofpoint engagement manager coordinates them.

Implement Controls for Baseline Protection

Our staff engages with your security teams on an ongoing basis. We are there to help you deploy and tune products and

Assess Threats Facing Your VAPs

Our experts will examine your VAPs and cyber threats. They will provide you with actionable insights to better protect your organization.

Adapt Your Controls to the Changing Landscape

We will suggest controls and processes to help you adapt to threats specific to your organization. The measures may include configuration changes, end-user communications and training material. We will also help implement them.

Report and Benchmark Your Security Progress and Posture

We provide executive-suitable reporting on the threat landscape and threat position relative to that of your peer group. We also deliver ongoing metrics on security posture and progress.

The Team

Our team includes cyber-threat intelligence analysts, threat researchers, email security experts, technical managers and consultants. We have extensive experience in all federal communities, including the DoD, IC and CIV.
