proofpoint

THREATS BY REGION

Attackers used banking Trojans to target victims in specific geographies, further echoing the trend of human-driven exploits. These attacks use lures and attachments in local languages; region-specific web code that relays malicious instructions (web injects); and campaigns timed to align with the business day – and clicking behaviour – of their intended recipients.

Legend:
- Dridex
- Betabot
- Ursnif
- The Trick
- Vawtrak
- Nymaim
- Gootkit
- Retefe
- Tinba
- Citadel
- Panda Banker
- Zeus
- Wildfire
- Zloader
- Zyklon
- Bolek
