Over 90% of attacks start with email.

That’s why organisations choose us to stay ahead of today’s fast-moving threats targeting their Office 365 users. Stay protected from targeted attacks, business email compromise (BEC), ransomware, and more.

**Prevent Business Email Compromise**
Detect, block, and classify email designed to trick people into sending money or sensitive data. Our multi-layered approach includes: authentication, robust email policies, dynamic classification, and data loss prevention (DLP).

(ForB) “Business E-mail Compromise: The 3.1 Billion Dollar Scam.” June, 2016.

**Detailed Forensics**
Your incident response efforts can mean the difference between quick remediation and a costly, disruptive breach. We help you respond faster and more effectively with a wealth of forensic detail about every attack.

**Block Credential Phishing**
Today’s cyber attacks target people—especially those with access to your most critical data. Stop credential phishing emails before they reach your Office 365 inboxes.

**Accurate Bulk Mail Classification**
The only thing worse than bulk email slipping through your inbox filters is legitimate email being blocked. We classify incoming email as spam, bulk or mission-critical with pinpoint accuracy.

**Clear Campaign Visibility**
Cyber attacks are not created equal. To respond effectively, you need to distinguish between broad-based campaigns and highly targeted attacks—and hunt the threats that matter most.

**Threat Response Auto-Pull**
Reduce threat exposure and save hours of work per incident with our Auto-Pull feature. Auto-Pull automatically locates delivered emails with malicious URLs or attachments and pulls them into a quarantine so that your users can’t click.

**Easy Security Ecosystem Integration**
Your security tools should work together for a far-reaching, cohesive defense. We integrate your email events with the security infrastructure you already have. Get better threat intelligence, faster threat containment, and greater visibility.

Integration Partners include Palo Alto Networks, Splunk, Imperva, CyberArk, and more.

**Email Continuity**
Modern business relies on email. In the event of an Office 365 outage, we keep your email flowing to keep your business humming. Avoid the security and compliance risks caused by frustrated employees turning to non-sanctioned communication channels.

**Outstanding Customer Support**
Our security experts help you deploy and sustain the highest level of security—no matter how your people work.
