proofpoint.

LEVEL ONE
CASB AND CAD DEPLOYMENT

FORMAT
Web-based Training (WBT)

DURATION
50 minutes

INTENDED AUDIENCE
Security Admin

REGISTRATION
Contact training@proofpoint.com for registration information.

When a customer purchases Proofpoint Cloud Account Defense (CAD) or Proofpoint Cloud App Security Broker (PCASB), they work with Professional Services to implement the applications. This course provides an overview of the deployment process that can be taken either before the implementation starts to learn what is ahead, or after the implementation is underway or complete to provide a historical reference of what occurs in a typical deployment. Please understand that no deployment is typical and Professional Services will work with you to customize your deployment.

COURSE OUTLINE

Lesson 1: Introduction
This lesson introduces the process used by Professional Services to deploy a typical CAD or PCASB installation.

Lesson 2: Microsoft O365 onboarding
This lesson explains how CAD and PCASB communicate to Microsoft Office 365 using APIs and how to enable access to those APIs for Proofpoint.

Lesson 3: Onboarding G Suite and other cloud providers
This lesson describes how to onboard CAD and PCASB with G Suite and PCASB with other supported cloud applications.

Lesson 4: Configuring the environment
This lesson describes how to configure users, groups, networks, and locations so they can be used to create targeted rules for future configurations.
