Regulated and sensitive data is required for day to day business. The organization must monitor the data to determine how it's being used is compliant to the laws, regulations, internal business practices, and whether it's at risk of data breach. Proofpoint Cloud App Security Broker (PCASB) analyzes data searching for sensitive data and provides visibility into potential breaches and potential remediation options. This course explains how to create rules to detect sensitive data and configure possible remediation options.

COURSE OUTLINE

Lesson 1: Policy Configuration

This lesson describes the DLP rule creation workflow.

Lesson 2: Building Detectors

This lesson describes how to build detectors to find DLP in documents.

Lesson 3: Building Rules

This lesson describes how to build rules to detect and remediate DLP violations.

ABOUT PROOFPOINT

Proofpoint, Inc. (PFPT) is a leading cybersecurity company that protects organizations' greatest assets and biggest risks: their people. With an integrated suite of cloud-based solutions, Proofpoint helps companies around the world stop targeted threats, safeguard their data, and make their users more resilient against cyber attacks. Leading organizations of all sizes, including more than half of the Fortune 1000, rely on Proofpoint to mitigate their most critical security and compliance risks across email, the cloud, social media, and the web.
