

PROOFPOINT PHISHING SIMULATION AND SECURITY AWARENESS

KEY BENEFITS

- Change users' behavior to reduce risks stemming from phishing and ransomware attacks
- Prioritize and improve incident response
- Provide consistent training across the globe with multi-language support
- Track results and progress with real-time reporting

Proofpoint Phishing Simulation and Security Awareness helps you test and educate your employees about email attack tactics. From Wombat Security, a Gartner MQ leader, it gives you an added layer of security to:

- Increase awareness
- Reduce the number of successful phishing attacks and malware infections
- Prevent future security breaches

More than 90% of cyber attacks start with an email. Protect your people and data is critical. Solutions that detect and block malicious emails are part of the solution. You can also reduce the likelihood of successful attacks such as phishing or ransomware through effective threat simulation and security awareness training.

PROTECT YOUR ORGANIZATION WITH THREATSIM PHISHING SIMULATIONS

Know which employees are susceptible to phishing and spear-phishing attacks with ThreatSim® Phishing Simulations. ThreatSim allows security teams to simulate phishing attacks. You get more than 500 different phishing templates across 30 languages and 13 categories. You can evaluate users on multiple threats, including:

- Malicious attachments
- Embedded links
- Requests for personal data
- And more

We add new templates every month based on customer requests, seasonal topics and real-world phishing emails seen in the wild.

Users who fall for a simulated attack receive practical "just-in-time" teaching. They learn the purpose of the exercise, the dangers of real-world attacks, and how to avoid future traps. You can help your most vulnerable users by automatically assigning interactive training to anyone who falls for a ThreatSim simulation.

EDUCATE EMPLOYEES WITH INTERACTIVE TRAINING MODULES

You get more than 35 interactive training modules in more than 30 languages. Through a mix of game-based and scenario-based modules, users get hands-on practice at recognizing and avoiding a wide range of phishing attacks and other social engineering scams. Our customizable Training Jackets allow you to add content to the start and close of each module.

Training is available on demand. Each module averages just 5 to 15 minutes to minimize disruption to daily work routines.

REDUCE RISKS WITH PHISHALARM AND PHISHALARM ANALYZER

PhishAlarm® brings phishing prevention to the desktop. The PhishAlarm email client add-in is included with ThreatSim, allowing your people to report suspicious messages with a single mouse click. Users who report an email get instant positive reinforcement in the form of a “thank you” pop-up message or email.

PhishAlarm Analyzer prioritizes reported messages and improves incident response. It enables administrators to quickly review key details, decide, and act. With Phish Alarm and PhishAlarm Analyzer, you can reduce the window of risk associated with active phishing attacks.

ASSESS WEAKNESSES WITH CYBERSTRENGTH

Cyberstrength® is a powerful web-based assessment tool that identifies areas your employees may be susceptible to without having to run a mock attack. Cyberstrength establishes a baseline measurement of your employees’ understanding of critical cybersecurity topics. From there, you can periodically reassess to track progress and target areas of concern.

We offer a library of more than 175 questions. You can also create custom questions to gauge how well your people know your organization’s policies and procedures. With Cyberstrength, you can identify where you are susceptible—from an organizational level down to the individual.

Available in a number of packages to suit customer needs, our threat simulation and security awareness offerings improve your risk profile through employee training and testing.
