The Level One – Protection Server: Basics course introduces students to the concepts of email architecture and protection with an emphasis on protecting customers from unwanted or malicious email entering an enterprise. This Level One course is based on PPS 8.8.

COURSE OUTLINE

Module 1: Email Messages

Describe the process of how SMTP mail servers communicate with each other to send and/or receive mail.

Module 2: PPS Message Path

Explore the many PPS modules as well as the message path process.

Module 3: PPS Deployment

Describe the various deployment options for PPS.

Module 4: PPS Management UI

Describe how to navigate the PPS Administrator interface.

Module 5: Filtering

Discuss the PPS delivery and module precedence order.

Module 6: Rules

Describe a rule and discuss the basics of policy routes, quarantines and dispositions.

Module 7: User Repository

Describe the user repository as it relates to user hierarchy and filtering.

ABOUT PROOFPOINT

Proofpoint, Inc. (PFPT) is a leading cybersecurity company that protects organizations' greatest assets and biggest risks: their people.
