

# PROOFPOINT P5 AND P5A

Proofpoint P5 and P5A provide the industry's best security and compliance for Microsoft Office 365 and other cloud-based collaboration tools. We help you collaborate securely and stay compliant with solutions that save you time and money.

## P5 PACKAGE

- Email Protection
- Proofpoint Targeted Attack Protection (TAP) and Tap SaaS Defense
- Threat Response Auto-Pull (TRAP)
- Email DLP
- Email Encryption
- Cloud App Security Broker
- Email Continuity

## P5A PACKAGE

Everything in P5, plus:

- Enterprise Archiving
- E-discovery and Analytics

## PROOFPOINT P5—SECURITY FOR EMAIL AND CLOUD APPS

The Proofpoint P5 package includes security for email, cloud applications and beyond. Keep your users secure and productive with this set of core products from our platform.

### Block threats with Email Protection

Proofpoint Email Protection blocks unwanted and malicious email. It gives you fast search, granular visibility and control—no matter the size of your organization. This solution helps you secure your users from email threats.

### Secure cloud apps and deal with compromised accounts with PCASB

Proofpoint Cloud App Security Broker (PCASB) protects organizations from advanced threats, accidental sharing of sensitive data and compliance risks in the cloud. PCASB gives you a granular, people-centered view of app access and data handling to secure Microsoft Office 365, Google G Suite, Box and more.

With PCASB you can quickly identify and remediate compromised accounts that could be used for internal phishing or data exfiltration. PCASB blends advanced threat protection, access control, data loss prevention (DLP), third-party apps governance and multifactor authentication. Our powerful analytics help you grant the right levels of access to users and third-party apps based on the risk factors that matter to you.

### Protect email and SaaS apps with TAP

Proofpoint Targeted Attack Protection (TAP) provides a centralized view of advanced threats across your email and cloud-based file shares.

For email, it helps detect, mitigate and block advanced threats that target people. We detect known and new, never-before-seen threats that use malicious attachments and URLs. No security tool stops targeted attacks more effectively. With TAP you can block polymorphic malware, weaponized documents, credential phishing and more.

TAP SaaS Defense detects compromised Office 365 accounts and malicious files in Microsoft OneDrive, SharePoint Online and more. You get a user-centric view of accounts that may be compromised and putting your data at risk. Plus, as files are added to SaaS services from within your environment, SaaS Defense uses multilayer analysis to detect potential threats by examining behavior, code and protocol.

### Extend orchestration and automation with TRAP

Proofpoint Threat Response Auto-Pull (TRAP) extends your orchestration and automation capabilities to retract malicious emails that were delivered to user inboxes. TRAP is an entry-level version of our Threat Response suite that removes malicious emails based on alerts from TAP. And it implements additional business logic to find and remove internal copies of messages that were forwarded to others.

### Stop data loss with Email DLP

Proofpoint Email DLP allows you to prevent employee negligence and malicious data exfiltration by giving you accurate and transparent control of your outgoing communications. You no longer need to force your end users to make policy decisions about the nature and protection of the content they send. You can simply have them operate normally, while Email DLP enforces email communication policies centrally and automatically. Plus, the policies set in Email DLP can be extended to our CASB solution for unified data loss prevention.

### Secure communication with Email Encryption

Proofpoint Email Encryption makes your secure communication simple, seamless, and automated. It provides policy-based encryption of messages and attachments. This allows you to protect sensitive email messages. It also ensures that your affiliates, business partners and end users have seamless access to secured messages on their computers and mobile devices.

### Keep workers connected with Email Continuity

Email outages can be costly and expose your organization to security and compliance risks. With Proofpoint Email Continuity, you have an always-on insurance policy to keep users connected and productive during email outages. Users maintain access to their email, contacts and calendar. And all email sent during the outage can automatically move to their standard email inbox when service is restored.

## PROOFPOINT P5A—MAKING COMPLIANCE EASY

The Proofpoint P5A package includes all the security of P5, plus archiving, e-discovery and analytics. P5A helps you retain and analyze documents and communications to keep you compliant. And it allows you to adapt to evolving regulations in industries and jurisdictions around the world.

### Simplify compliance with Enterprise Archiving

Proofpoint Enterprise Archive leverages cloud intelligence to preserve, discover and supervise business-critical information. We give you deep insight into your data while helping you reduce cost, complexity and risk. You get a scalable cloud architecture, guaranteed admin search performance, and unmatched customer service—along with the industry's most advanced encryption. You'll also get unlimited self-service, high-performance export. This gives you complete legal and compliance control.

### Improve legal workflow with E-discovery and Analytics

Proofpoint E-discovery and Analytics is a proven and intuitive e-discovery workflow for legal teams. It improves your insight with real-time search results, integrated early case analytics and predictive coding. And it works across a breadth of content and file types, so you can get relevant data faster.

## LEARN MORE

We can also help you authenticate email to help stop email fraud, detect lookalike domains, and teach your users to spot and report email threats through training and simulated attacks. We offer premium threat information services, intelligent supervision for compliance, and more. To learn more about how Proofpoint can support your email and cloud applications for Office 365, G-Suite and more, visit [proofpoint.com/office365](https://proofpoint.com/office365).

#### ABOUT PROOFPOINT

Proofpoint, Inc. (NASDAQ:PFPT), a next-generation cybersecurity company, enables organizations to protect the way their people work today from advanced threats and compliance risks. Proofpoint helps cybersecurity professionals protect their users from the advanced attacks that target them (via email, mobile apps, and social media), protect the critical information people create, and equip their teams with the right intelligence and tools to respond quickly when things go wrong. Leading organizations of all sizes, including over 50 percent of the Fortune 100, rely on Proofpoint solutions, which are built for today's mobile and social-enabled IT environments and leverage both the power of the cloud and a big-data-driven analytics platform to combat modern advanced threats.
