

PROOFPOINT ENTERPRISE ARCHIVING FOR INSURANCE

STAY COMPLIANT AND IN CONTROL

Insurance companies like yours have to comply with many regulations, both state and federal. These cover the preservation, protecting and accessibility of business records. The demands of these regulations create organizational challenges, but they can be addressed effectively with the right organizational policies and technology. Proofpoint Enterprise Archive is a cloud-based archiving solution that simplifies legal discovery, regulatory compliance and end-user data access. It gives you a central, searchable repository of a wide range of content types. And it eliminates the headache of managing an archive in-house.

COMPLIANCE AND DISCOVERY FEATURES

Enterprise Archive offers security and performance to meet today's compliance and discovery-readiness needs for insurance companies.

Fast access for early case insight

Enterprise Archive's high-performance search features give you insights to help you refine your discovery strategies. Your legal team can easily search in near real time. This can be done across email and within more than 500 types of attachments, social media and enterprise-collaboration communications. Instant access to data greatly reduces your time and cost of collecting, filtering, and searching the data collected through restored backup tapes, imaged hard drives and Microsoft Outlook PST files.

Rich data visualization

With our optional advanced analytics, you get advanced insight into electronically stored information (ESI). This helps you with better decision-making. Interactive visuals help you understand your search results. Get insight into key parties, top terms, and content distribution over time.

Fast self-service export

Enterprise Archive lets your legal team quickly export large volumes of relevant content in PST or EDRM XML formats—without professional services fees. The system can automatically upload the results to third-party service providers. That means fewer delays and questions about compromised chain of custody.

Easy-to-enforce retention policies

Enterprise Archive helps you create, maintain and—most important—consistently enforce your information retention policies. This enforcement is automatic and based on rules you can configure. When the data has reached the end of its retention period, high-performance disposition lets you quickly purge it. Every policy change and disposition action is tracked, which gives you a truly defensible disposition process. What's more, we can help you comply with specific insurance industry regulations such as GBLA, HIPAA/HITECH and SOX. We can also help you comply with financial regulations like FINRA and SEC.

Fully automated legal hold processes

With Enterprise Archive, your litigation hold process is simple and fully automated. Your legal team can instantly preserve data in holds beyond their assigned retention periods. You can assign access to search exclusively within data assigned to a hold. And an easy-to-use interface provides a full reporting and audit trail. These unique features help you manage data-preservation requirements in an efficient, transparent way.

Intelligent supervision for regulatory compliance

Proofpoint Intelligent Supervision is an optional module that is built on top of Enterprise Archive. It allows your compliance staff to systematically review messages. This includes email, social media, Bloomberg and instant messaging. Content selected for review—either as potential policy violations or through a random sampling process—is automatically routed to the users authorized to act on them. Intelligent Supervision also provides reports that help you manage the review process and keep you ready for regulatory audits.

Broad support for social and collaboration solutions

Enterprise Archive supports a wide range of content types. Proofpoint Enterprise Collaboration Archiving and Proofpoint Digital Risk populate the archive with data from all key collaboration and social-media platforms.

INNOVATIVE CLOUD ARCHITECTURE DESIGNED FOR SCALE AND MAXIMUM SECURITY

Enterprise Archive securely archives data in our innovative, grid-based cloud storage infrastructure. This ensures you have easy access to your data. You get the performance, scalability and cost savings of the cloud—and the highest levels of security and privacy.

Failsafe archiving process

Unlike other cloud-based tools, Enterprise Archive gives you two options to ensure complete capture. With an optional on-premises appliance, its “pull-and-confirm” method pulls messages from the journaling mailbox. Then it confirms that they are stored in the archive before removing them from the journal. And if you have a fully hosted deployment, our optional Compliance Gateway solution provides you with a reconciliation process. It also provides reporting to give auditors evidence of complete capture.

Search performance guarantee

We guarantee our search performance. You can always count on having reliable access to archived data in seconds. Other on-premises tools slow down over time and require constant hardware upgrades as the data store grows. Enterprise Archive scales up on demand. Our grid storage architecture and parallel search technology ensure real-time search performance. And it stays fast no matter how large your archive grows or how complex your searches get.

The most secure archive in the industry

With our patented Double Blind™ Key Architecture, we're the only archiving vendor that ensures the data leaving your site is always encrypted. You get uncompromised data security. Your data is protected both in transit from your environment and while under management within our cloud infrastructure. Your encryption key is unique to you. And you can manage the encryption key for full control over who can access your data within the archive. We couple this breakthrough approach with operational and security practices that are SSAE-16 certified. This gives you the assurance of complete data privacy and uncompromised security.

PROVEN SUCCESS

Delivering business-critical data is a full-time job. Our SSAE-16 Type II certification is not just for our physical facilities, but also for the service itself. This includes our global data centers and our world-class support and operations infrastructure. We proactively identify issues and take action. And in many cases, we take care of things before you're even aware of the problem. Our market-leading customer renewal rates and customer satisfaction ratings reflect our responsive, seamless customer experience.
