57 SECURITY BREACH
ATTEMPTS. **STOPPED.**

With Advanced Threat Protection, it's
business on.

12:37PM

19 MALICIOUS TARGETED
ATTACKS AVERTED.

Proofpoint Advanced Threat Protection

**When business fears nothing,
business can do anything.**

This is a person.

Your company is made up of many people like him. People who are busy creating, building, inspiring, innovating, and connecting. Lots of connecting. And sometimes, because they're busy juggling so much, those people make mistakes. It's why they're almost always the target of cyberattacks; through their email, their data, their social media, or their mobile applications.

Proofpoint knows that your greatest resource is the people that make up your company. That's why we give you the insight to detect threats and the tools to stop them before they even reach your employees.

When advanced threats are stopped before a breach can occur, your people are free to focus on all the creating, building, inspiring, innovating, and communicating that they do so well. They're free to create more value for your company.

Proofpoint detects attacks before they happen by:

- Watching the flow of the attack channels to provide comprehensive protection
- Correlating information about bad actors and tools across the attack chain, updating defenses continuously
- Protecting everything wherever and whenever people work

“

Keeping threats from the inbox means we can keep innovating—while giving IT peace of mind.

”

02:53PM

27 MALICIOUS ATTACHMENT
ATTACKS NEVER GET A
CHANCE TO ADVANCE.

Proofpoint Advanced Threat Protection

**When threats are off,
business is on.**

You want business to hum? Make sure your people and the data they use are truly secure and compliant. That's when productivity and success accelerate. Proofpoint safeguards your most vital productivity assets—the humans that make your business tick. Through comprehensive protection across the employee platform, environment, and device spectrum, we ensure that your business never falters, even if attacks occur.

Proofpoint allows business to keep moving forward by:

- Detecting advanced threats quickly and effectively
- Delivering end-to-end, real-time insight
- Deploying quickly to defend people
- Reducing attack surfaces, finding the sensitive data, and protecting it as it is sent, stored, and archived
- Detecting security risks on social platforms and preventing compliance violations

“

Because we fear attacks less,
our people can do so much more.

”

06:26PM

MALICIOUS EMAIL MESSAGES
DIDN'T MAKE IT INTO WORK TODAY.

Proofpoint Advanced Threat Protection

**The best way to avoid a
security aftermath is with
a before strategy.**

Sometimes, even despite being diligent about detection and militant about protection, attacks worm their way into your enterprise. That's when you need to respond fast, so your people can get back to business as usual without productivity loss.

Solutions that stay ahead of the bad guys enable your employees to quickly mitigate threats so that business never needs to slow down, even when under attack.

Proofpoint instantly verifies, prioritizes, and contains advanced threats and targeted attacks detected by industry leading security vendors through:

- Situational Awareness
- Infection Verification
- Threat Containment
- Automated Workflows

“ Instead of looking over our shoulder for threats, we keep our eyes on business. ”

Proofpoint provides protection against the most complex cyber threats across any network or any device. Our comprehensive solution detects threats before they happen, analyzes them to assess the risks, and provides the tools and support to quickly contain and resolve incidents. With this strategy, we aim to solve the advanced threat problem in a truly unique way—by putting your people at the heart of everything you do.

Because people are everything to a business.

- It's not just about stopping advanced threats, it's about protecting people.
- By securing the information people create and use, Proofpoint reduces the attack surface and compliance risk.
- When you can act more quickly before, during, and after an attack, business is always on.
