

Collaboration Security Tier 2

Protecting against multichannel, multistage attack campaigns

As collaboration moves beyond email into a variety of digital channels, organizations now operate with highly connected ecosystems. In the agentic era, AI-powered tools and autonomous agents have become part of this extended workforce. This, in turn, has expanded the attack surface as threat actors aim to exploit trusted relationships among employees, partners, customers, and AI agents. Disconnected point products make it more difficult for security teams to defend against these risks as they create additional gaps in their defenses, slow response times, and strain resources.

Proofpoint Collaboration Security Prime is a scalable platform that extends threat protection for email and beyond. It secures trusted interactions in the agentic workspace for both humans and AI agents. At Tier 2, threats are investigated and remediated faster across email, collaboration and messaging tools, social media, cloud environments, and the supply chain.

Key capabilities include:

- ✓ **Accurate threat detection:** Prevents the widest range of threats with 99.999% detection accuracy
- ✓ **Pre- and post-delivery inspection:** Stops advanced email threats, including AI-driven exploits, BEC, email bombing, QR-code attacks, and callback phishing
- ✓ **AI-powered account protection:** Defends against account takeovers and compromised supplier accounts
- ✓ **Cross-platform phishing protection:** Blocks malicious links across multiple channels
- ✓ **Centralized cross-channel investigation:** Maps threat interactions across email, messaging, cloud, and the supply chain
- ✓ **Automated threat response:** Automatically removes malicious emails, revokes unauthorized changes after ATO incidents, and applies adaptive controls for compromised suppliers

3 Key benefits

- 1. Stronger protection:** Stop AI-scaled, multichannel, multistage attacks across all digital channels as well as the supply chain; protect against account compromise for employees and suppliers
- 2. Faster threat response:** Accelerate threat response from days to minutes by eliminating manual triage and tool sprawl, correlating cross-channel signals; automate investigation, containment, and remediation
- 3. Comprehensive view:** Get a map of threat interactions across various control points to see where attacks start, how they spread, and where exposure exists in real time; understand which security events need immediate attention

Collaboration Security Tier 2 gives security operations center (SOC) teams a single console where they can see fully mapped attack campaigns and manage incidents. This solution eliminates manual investigation, speeds response, and helps teams stay ahead of rapidly evolving, machine-scale attacks.

Proofpoint Collaboration Security solution tiers

What to expect during onboarding

Our Professional Services team works with you to design and guide each step of your implementation to ensure a smooth experience. With our proven approach, you can begin realizing value from Prime immediately and fully deploy the solution **weeks, not months**.

Fast, guided integration: Deployment is supported with clear documentation, SDKs, and templates created by our consultants.

Tailored rollout: Implementation is phased and designed to align to your organization's priorities, maturity, and technical environment.

Proven best practices: Expert-led, prescriptive onboarding ensures a confident handoff and empowers you to successfully manage your Prime solution post-deployment.
