

Improving Cybersecurity and Productivity for Public Servants

Empower your workers to access the data they need to serve the public safely and securely

Products

- Proofpoint Aegis platform
- Proofpoint Sigma platform
- Proofpoint Security Awareness
- Proofpoint Emerging Threats Intelligence
- Proofpoint Threat Intelligence Services

Key Benefits

- Stop phishing attacks, ransomware and other email-based threats
- Protect against data loss and other threats that come from the cloud
- Identify and mitigate threats posed by malicious or negligent insiders
- Train your employees to learn how to identify and avoid phishing attacks, ransomware and other threats

Government agencies are under constant attack. And they're vulnerable to threats from both inside and outside of their organization. So whether their employees work in the office or remotely, these agencies must provide a safe and secure way for workers to access the data they need to address citizen concerns and provide important community services.

Federal funding may be helping to strengthen state and local government through the infrastructure bill and the cybersecurity grant program.¹ But threat actors are more equipped, creative and (financially) motivated than ever. As such, they are bound to increase the number of attacks that target vulnerable users within public organizations. To stop them, you need a multilayered, people-centric approach that spans the entire attack chain.

Research such as that from the *Verizon DBIR* and the *Proofpoint Human Factor Report* has consistently observed that people—not technology—are the most critical variable in today's cyber threats. Proofpoint can help. We have the human-centered solutions you need to mitigate common cybersecurity risks and improve the productivity of your public servants.

Our solutions include:

- **Email and cloud-based threat protection.** Proofpoint email security solutions can stop phishing attacks, ransomware and other email-based threats. Our cloud security solutions can protect you from data loss and other threats that come from the cloud.
- **Data loss prevention.** Proofpoint data loss prevention (DLP) solutions can help you prevent sensitive data from being leaked either accidentally or intentionally. You can use DLP to scan emails, documents and other files for sensitive data. You can also use it to prevent that data from being sent outside of your organization or shared with unauthorized users.

¹ For more information, go to the Cybersecurity & Infrastructure Security Agency's State and Local Cybersecurity Grant Program page (<https://www.cisa.gov/state-and-local-cybersecurity-grant-program>)

- **Insider risk prevention.** Proofpoint insider risk prevention solutions can help you identify and mitigate threats posed by malicious or negligent insiders. These solutions can monitor user behavior, track file access and detect suspicious activity.
- **Security awareness training.** Proofpoint security awareness training can help your employees learn how to identify and avoid phishing attacks, ransomware and other threats. Our training is delivered in a variety of formats, including interactive modules and videos.

As state and local governments continue to improve cybersecurity posture, they must strike a balance between the capabilities and the longevity of each of their security implementations. A focus on prevention is the first step in mitigating risks. Employees in every department and team should be seen both as a vulnerability and as a defense. Every solution should allow employees to minimize vulnerabilities and risk. They should also allow them to work on daily tasks uninhibited.

Proofpoint solutions can help you improve cybersecurity and the productivity of your public servants. They protect your organization from a wide range of threats. And they help you comply with regulations.

Our solutions:

- **Reduce risk of data breaches.** Proofpoint can help you reduce the risk of data breaches by preventing phishing attacks, ransomware and other threats.
- **Improved compliance.** Proofpoint can help you comply with many regulations. These include FedRAMP, StateRAMP, TX-RAMP and CMMC regulations. They also include HIPAA, PCI DSS and GDPR.
- **Increased productivity.** Proofpoint can help you increase your worker productivity. We can reduce the time your employees spend avoiding common attacks and dealing with security threats.

State and local governments protect citizen data and improve community services. Proofpoint can help you protect your most important asset—your people. Whether your workers are targeted through email, the web, social media or cloud apps, we provide the most effective cybersecurity by protecting interactions between people. We help stop threats before they reach their targets. This helps safeguard valuable data and protects public servants and assets from cyber attacks.

ABOUT PROOFPOINT

Proofpoint, Inc. is a leading cybersecurity and compliance company that protects organizations' greatest assets and biggest risks: their people. With an integrated suite of cloud-based solutions, Proofpoint helps companies around the world stop targeted threats, safeguard their data, and make their users more resilient against cyber attacks. Leading organizations of all sizes, including 75 percent of the Fortune 100, rely on Proofpoint for people-centric security and compliance solutions that mitigate their most critical risks across email, the cloud, social media, and the web. More information is available at www.proofpoint.com.
