

Proofpoint Enterprise Archiving

Providing Long-Term Information Retention, Supervision and E-Discovery for the Digital Workplace

PRODUCTS

- Proofpoint Enterprise Archive
- Proofpoint E-Discovery Analytics
- Proofpoint Intelligent Supervision

KEY BENEFITS

- Deliver electronic communications from a variety of sources to your archive at scale
- Supervise communications efficiently within your network and on third-party platforms
- Discover relevant information for litigation, internal investigations and audits
- Retain communications in a secure, accessible and compliant archive
- Provide proof of compliance

The pulse of your business beats digitally. Employee collaboration, client communications, promotions and ads all flow through digital channels. And it all needs to stay secure, compliant and ready for legal requests.

Proofpoint Enterprise Archiving is a secure, modern, cloud-based repository. It helps you streamline long-term retention, supervision, and e-discovery across:

- Leading messaging platforms
- Cloud-based file-shares
- Social media
- And more

KEEP UP WITH DIGITAL COMMUNICATIONS CHANNELS

You're dealing with more content, across more digital channels, than ever. More employees are dispersed and working remotely. Today's business communication happens online and over multiple channels. At the same time, clients and prospects expect to engage with you on social media and other digital platforms.

Legacy on-premises archiving tools are struggling to keep up with it all. The result: more content, more content sources—and more headaches managing it.

Proofpoint Enterprise Archiving helps you gain control over this growing deluge of data and maintain compliance more effectively and efficiently.

CAPTURE COMMUNICATIONS—EMAIL AND BEYOND

The Challenge: More Content Types

For many organizations, capturing and archiving businesses communications is a compliance mandate. And to that end, you probably have an archive for email. But how do you handle other content sources?

Many firms have poured IT resources into custom tools for bringing new content sources into their archive. But these workarounds are less than ideal. They often miss some content types and need a lot of upkeep.

Our Solution: Broad Source Platform Support

Enterprise Archive has built-in connectors that can index more than 500 file types. It helps you easily capture, store, search for, and retrieve content from leading target sources such as:

- Email, including on-premises Microsoft Exchange servers and Microsoft 365 (formerly Office 365)
- Collaboration platforms such as Slack and Microsoft Teams
- Social-media platforms such as Facebook, Twitter, LinkedIn and Instagram

SUPERVISE STRATEGICALLY WITH THE HELP OF TECHNOLOGY

The Challenge: Scaling Supervision

In sectors such as financial services, you must supervise all business communications. If your firm is growing, or simply evolving, you need an archiving solution that scales with you. With people and random sampling alone, you may miss compliance issues that need your attention the most—and waste time and money on low-risk items that don't.

Enterprise Archive can help you surface issues that pose the highest risk to help direct your efforts. It can also help you quickly catch and remediate violations on social media and other public channels—before they “go viral” and garner unwanted scrutiny.

Our Solution: Automation and Insight

Intelligent Supervision

With Intelligent Supervision, you can meet supervision requirements for email and other communications. We help reduce the “noise” that takes up your time and resources.

Intelligent Supervision ignores pre-approved content, low-risk content (such as bulk mail), and threading conversations. And its detailed dashboards offer insight that helps focus and streamline your efforts. It highlights issues that pose the greatest compliance risks and trends on how often violations occur. That means your compliance team can spot violations faster and more accurately.

RETAIN COMMUNICATIONS IN A SECURE AND ORGANIZED ARCHIVE

The Challenge: Retaining Communications in a Cloud-First World

To fully retain communications, you need an archive that is:

- Secure
- Accessible
- Searchable

Legacy on-premises tools struggle to keep up with today's cloud-based content. Search speeds are often slow. Responding to audit or e-discovery requests in a timely manner is a challenge. And you may not be able to ensure your records are complete—or prove it in an audit.

Our Solution: Easier Access, Fast Search, Streamlined Review

Enterprise Archive

Enterprise Archive stores data securely in our innovative, grid-based, cloud storage infrastructure. That means easy access to your data and near-real-time searches, making it faster and more cost-effective to:

- Collect information
- Preserve it in a legal holds and e-discovery requests
- Export it for e-discovery and audits

E-Discovery Analytics

With E-Discovery Analytics, you can improve your e-discovery response time even further. Our dashboards and visualizations help you to see patterns worth investigating. Case management enables you to group e-discovery elements into cases so you can monitor responses to e-discovery requests more effectively and efficiently. Topic clustering and timeline graphing enable you to define your search criteria more precisely. And technology assisted review (TAR) helps streamline review and reduce outside costs.
