Collaboration Security Prime

Securing trusted interactions in the agentic workspace

Threat actors no longer focus on a single channel or attack vector—they follow people wherever work happens. Email remains a primary target, but it now exists alongside collaboration and messaging tools, cloud applications, and an expanding set of AI-powered tools and embedded assistants. Together, these environments form the agentic workspace: a highly interconnected ecosystem where humans and AI agents work side by side. To protect this expanding surface area, organizations have adopted fragmented point solutions. The result is slower, more manual investigation and response, limited cross-team coordination, and higher operational costs. Disconnected tools and workflows also create blind spots, making consistent and effective risk reduction difficult.
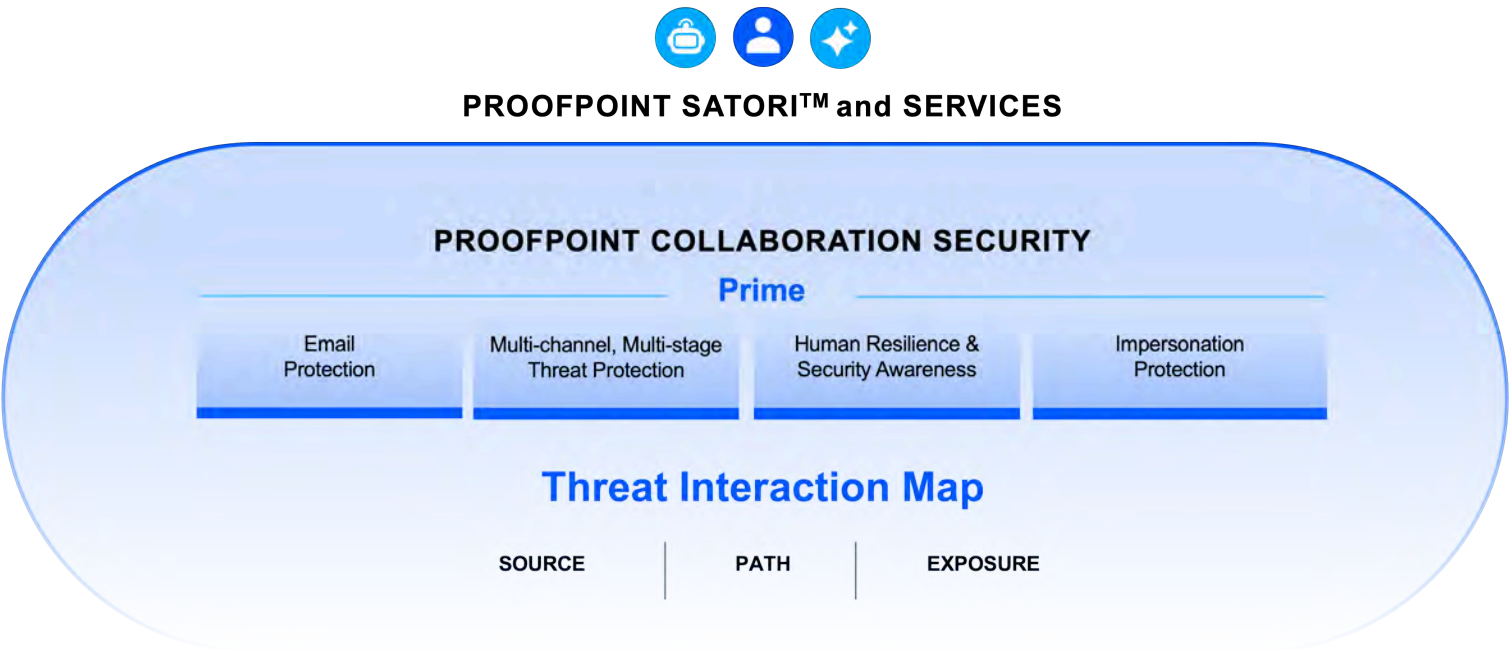

Proofpoint Collaboration Security Prime is a unified security platform that protects interactions across multiple channels in the agentic workspace. It delivers multichannel, multistage threat protection while strengthening human resilience against AI-generated threats—all from a single console.

⊘ **Stop multichannel threats:** Prime extends phishing protection beyond email to messaging platforms, social media, and other channels with 99.999% efficacy.

⊘ **Respond quickly to account compromises:** Prime automates remediation for internal account takeover threats. It also provides adaptive controls to stop threats from compromised supplier accounts.

⊘ **Secure trusted business communications:** Prime prevents brand impersonation through email authentication as well as rapid detection and takedown of lookalike domains.

⊘ **Elevate training to human risk management:** Prime delivers targeted, risk-driven learning that adapts to user roles, behavior, and threat exposure, which builds human resilience.

⊘ **Drive faster execution across teams:** Prime speeds up threat response with cross-channel attack mapping, automated threat-to-training workflows, and rapid domain takedowns.

3 Key benefits

1. **Complete risk reduction:** Secure every interaction—human and agent—by protecting against AI-scaled attacks across channels and stages; reduce repeat attack risk through targeted threat-guided learning

2. **Streamlined operations:** Unify cross-channel visibility, connect cross-team workflows for faster response, and turn live attacks into instant training with a single click

3. **Consolidation:** Unify tools and teams on a single integrated platform to lower total cost of ownership (TCO), simplify operations, and scale impact with managed expertise

You already have a strong cybersecurity foundation with Proofpoint Core Email Protection. Collaboration Security Prime extends that investment. You get a unified, human and agent-centric collaboration security platform—often at a lower cost than fragmented add-ons.

What to expect during onboarding

Our Professional Services team works with you to design and guide each step of your implementation to ensure a smooth experience. With our proven approach, you can begin realizing value from Prime immediately and fully deploy the solution **weeks, not months.**

Fast, guided integration: Deployment is supported with clear documentation, SDKs, and templates created by our consultants.

Tailored rollout: Implementation is phased and designed to align to your organization's priorities, maturity, and technical environment.

Proven best practices: Expert-led, prescriptive onboarding ensures a confident handoff and empowers you to successfully manage your Prime solution post-deployment.
