

# Proofpoint Content Capture for Facebook

## PRODUCT PREREQUISITES

Content Capture runs as an app on Facebook Business pages. Users will need to install the Proofpoint app on their Business Page using a unique link sent to them.

Whether it's to meet regulatory or corporate governance requirements, your firm needs to capture and retain employee communications content. Proofpoint makes it easy to capture, manage and retain data from your content sources, including Facebook. Through the Facebook Pages API, we capture content and deliver it to your data store for e-discovery, compliance and supervision.

## What We Capture

Content Capture collects the following types of Facebook Business Page activity:

- Posts
- Shares
- Comments
- Replies
- Likes
- Messages

Within these activities, we can capture the following content types:

- Text
- URLs
- Images
- Video (with limitations)

## Patrol Capabilities

The Content Patrol add-on extends your capabilities beyond capture.

With Content Patrol, you can:

- Automatically classify captured Facebook content and get notified of risks
- Automatically or manually remediate compliance violations by deleting:
  - Posts
  - Comments
- Monitor employee profiles for changes, revert unapproved changes and manage regular profile reviews

## How the Content is Handled

Content Capture transforms each piece of Facebook activity into email form. The content is attributed to users and sent to a designated mailbox for delivery to your enterprise data store or downstream services. If you are also using Proofpoint Content Patrol, classification data is sent to downstream sources with the captured content for use in supervision and e-discovery.

## Summary

With Proofpoint, you can capture and monitor Facebook content with ease. It's a win-win. Your employees and others who use social media on behalf of your company are free to collaborate and communicate. And you reduce your compliance risk and adhere to regulations.
