

Proofpoint Content Capture for Microsoft Teams

Whether it's to meet regulatory or corporate governance requirements, your firm needs to capture and retain employee communications content. Proofpoint makes it easy to capture, manage and retain data from your content sources, including Microsoft Teams. Through Microsoft APIs, we capture content and deliver it to your data store or downstream services for e-discovery, compliance and supervision. This is the method of capture supported by Microsoft.

Product prerequisites

In order to use the Change Notification API, special licensing requirements may apply. Please refer to your Microsoft account manager for more information.

What we capture

Content Capture collects the following types of Microsoft Teams activity:

- Teams channels
- Chats
- In-meeting chats

Within those activity groups, we capture the following types of content:

- Posts (including formatting)
- Shares
- Replies (channels only)
- Emojis
- Images

- Posts from apps
- Files posted to channels and chats
- Edits and deletes
- Threads

How the content is handled

Content Capture transforms each piece of captured Teams activity into email form and formats it to enable threading and include context such as the posts that precede it. We attribute the content to users. Then we send it to a designated mailbox for delivery to your data store or downstream services.

Summary

With Proofpoint, you can capture Microsoft Teams content with ease. It's a win-win. Your employees are free to collaborate and communicate. And you reduce your compliance risk and adhere to regulations.
