

Proofpoint Takedown

Rapid, expert-led investigation and mitigation of malicious sites targeting or impersonating your organization

Key Benefits

- **Expert Investigations and Support**
Every case is investigated by our team of expert analysts, who also handle evidence collection and coordination with providers, keeping you informed throughout so your team can stay focused on core operations.
- **Unmatched Threat Intelligence**
Leveraging proprietary threat intelligence and one of the industry's largest email traffic datasets, our team uncovers and validates malicious activity, enabling more effective mitigation.
- **Trusted Reporter and Rapid Mitigation**
Trusted by key domain providers and security partners, our team delivers high quality, evidence-based reports aligned with provider requirements, enabling faster action and a high success rate.
- **Seamless Integration** Takedown is natively integrated across various Proofpoint products and offers a flexible, automation-ready API that supports traditional and AI-driven workflows.

When malicious sites impersonate or target your organization to enable phishing, fraud, or malware distribution, every minute they remain active increases risk to your employees, customers, and partners. Navigating remediation can be complex and time-consuming, but with Proofpoint Takedown, our expert team handles the entire process on your behalf, so your team can stay focused on high-priority initiatives.

After submission, the Takedown Team leverages proprietary threat intelligence, extensive visibility into global email traffic, and trusted external intelligence sources to substantiate malicious behavior with a high degree of confidence, reducing reliance on customer-provided evidence.

Once a threat is confirmed, immediate protections are put in place across Proofpoint platforms and shared with trusted blocklist providers to limit exposure and provide global protection across multiple DNS layers within minutes.

At the same time, our team works directly with registrars, hosting providers, registries, and others to drive effective mitigation. Recognized as a Trusted Reporter, Proofpoint consistently delivers high-quality, evidence-based reports aligned with provider-specific requirements. This reduces friction in the review process, results in high success rates, and accelerates response times, with most threats resolved in 24-48 hours.

With native integrations across various Proofpoint products and a flexible, automation-ready API, organizations can incorporate Takedown workflows into SIEM, SOAR, and emerging AI-driven processes, improving scalability and reducing overall attack exposure.
